Causes of [Erectile Disorder](#) or Impotence in Men

Old Age:

With the increase in age, the functions in the body start to slow down. This might even cause a decrease in body functions as well. Men start to gain shorter erections and even loose firmness in erections as well. This might be caused by a decrease in the production of testosterone. There are a lot of sensual changes that have a link to old age. [Buy online Sildenafil Sublingual Spray](#), which is a perfect medication that helps men deal with the problem of erection failure, or ED. It is a superb remedy to gain hard erections instantly during sensual contact.

Low blood flow:

There is a decrease in the flow of blood to the [male organ](#). This impacts the quality of erections. This causes erections to be short and even short-lasting in nature. Arteriosclerosis (clogged arteries), high blood pressure, or pelvic trauma can cause erection failure, or [ED](#). The clogged arteries can cause problems in the supply of blood to the male organ.

Diabetes:

Diabetes can interfere with the erection process in numerous ways. A large number of men suffering from diabetes suffer from the problem of [erectile disorder](#), or ED. It can impact the process of sending and even receiving the nerve impulse. Due to poor nerve functioning, erections become more difficult to achieve.

High blood pressure (hypertension)

This illness can impact the erections and even harm the blood vessels. It can even cause the arteries to lose their elasticity.
