### Symptoms of Erection failure or Impotence

[Symptoms of ED](#) may include any of the following:

- Trouble while trying to get an erection
- Trouble while trying to keep an erection
- Unable to maintain firm erections
- Less interest in sensual contact

## Causes of Erection Failure or Impotence

To be able to gain an erection men need the proper functioning of the brain, nerves, hormones, and blood vessels. They all need to work together in harmony. Normal functioning of all these is necessary to acquire a firm erection. If any of these is not functioning properly then you might begin to suffer from erection problems. The problem of [erectile disorder](#) might be caused due to both physical and even psychological causes.

### Disease:

- Diabetes
- High blood pressure
- Heart or thyroid conditions
- Clogged arteries (atherosclerosis)
- Depression
- Nervous system disorders, such as multiple sclerosis or Parkinson's disease
- Other physical causes:
- Low testosterone levels
- Nerve damage from prostate surgery.
- Nicotine, alcohol, or cocaine use.
- Spinal cord injury.

### In a lot of cases, your emotions or relationship problems can cause ED, such as:

- Poor communication with your partner.
- Feelings of doubt and failure.
- Stress, fear, anxiety, or anger.
- Expecting too much from sensual contact

[Erection problems](#) can have an impact on men of any age group. However, it becomes more common as you get older. The physical causes are more common in men who are old. Whereas young men suffer from erection issues due to Emotional causes. If you can gain an erection in the morning or at night while you sleep then the cause of your problem will not be physical. It is essential to contact a healthcare provider to know more about normal nighttime erections.

### Types of [ED Treatment](#)
