

Common Misconceptions About Narcodol 50mg Tablets

www.online-health-guide.com

Narcodol 50 mg is essentially a medication that you use in the treatment of severe acute pain. It contains domperidone, paracetamol, and tramadol. On taking a **narcodol** tablet this medicine works by blocking pain transmissions. Which acts helps to drive your perception of pain effectively away. Now there are certain misconceptions about the chief ingredients of **Narcodol 50 mg** that exist. Here are a few insights about these drugs that you need to know about.

Myth No 1: Domperidone in Narcodol and Its Effectiveness Against Gastrointestinal Issues:

Although Domperidone, a key ingredient in **narcodol tab** is known for its effectiveness in relieving symptoms of gastrointestinal disorders. These include nausea and vomiting. It is not just restricted to that use, and is prescribed for other conditions. Such as gastric motility disorders along with preventing gastrointestinal side effects triggered due to certain medications.

Myth No 2: Paracetamol in Narcodol Tablet is Completely Safe to Take:

Typically, Paracetamol which is a major component of **narcodol tab** is a very safe medication that you need to take within recommended dosage prescribed by your doctor. It however becomes unsafe to take when you exceed the recommended dose leading to liver damage. Therefore, it becomes essential that while taking a medicine like **narcodol** you follow the dosing instructions prescribed by your physician or pharmacist. By not exceeding the recommended maximum daily dose.

Myth No 3: The Tramadol in the Narcodol Tablet is a Non-Addictive Pain Medication:

'Opioid Analgesics' is the medicine group to which Tramadol in the **narcodol tab** belongs. It is a drug that helps in efficiently managing moderate to severe pain. Moreover, when you take a dose of **narcodol 50 mg** the Tramadol in it can trigger dependence and addiction. Although at a considerably lower level than other opioid analgesics. Hence, it is necessary that you use a **narcodol tab** only under the directions of a doctor or healthcare professional.

Myth No 4: Narcodol 50 mg is Only a Pain Medicine:

When you take a **narcodol tab** it helps in effectively resolving mild-to-moderate pain issues. However, it is also true that one of the many **narcodol tablet uses** includes decreasing nausea and vomiting and symptoms. Which has association with headaches or menstrual cramps.

Now, as the **narcodol tablet uses** are varied it is a medicine that you must take if you want to resolve especially pain issues.
