What are the working principles of [Tadaga Power](#)?

[Tadaga Power](#) functions through a mechanism that hinders the activity of the enzyme phosphodiesterase type 5 (PDE5), which naturally degrades cyclic guanosine monophosphate (cGMP) present in the penile tissue. By inhibiting PDE5, [Tadaga Power](#) increases the amount of cGMP in the cells, which in turn shunts the calcium out of the smooth muscle cells and relaxes them, as well as dilates the blood vessels that supply the genital area during sensual stimulation. Through this mechanism, blood flow to the erectile tissues is improved, thus giving an opportunity for enthusiasm and sustainability of erections that are adequate for sensual activity.
