Understanding [Extra Super M Force](#)

Extra Super M Force is a pharmaceutical combination comprising two active components: Sildenafil Citrate 100mg and Dapoxetine 100mg. Sildenafil 100mg, a phosphodiesterase type 5 (PDE-5) inhibitor, is the same active ingredient in the famous erectile dysfunction medication [Viagra](#). It increases blood flow to the genital part, helping men achieve and maintain a firm erection when sensually stimulated. On the other hand, Dapoxetine 100mg is a selective serotonin reuptake inhibitor (SSRI) that effectively treats premature ejaculation by delaying ejaculation and prolonging sensual activity.

Mechanism of Action

Sildenafil Citrate (100mg)

[Sildenafil Citrate](#) primarily targets the physiological aspects of [erectile dysfunction](#). When a man becomes sensually aroused, nitric oxide is released, which activates an enzyme called guanylate cyclase. This enzyme increases the production of cyclic guanosine

monophosphate (cGMP), a chemical that relaxes the smooth muscles in the genital part and allows increased blood flow. However, PDE-5, an enzyme, breaks down cGMP, leading to a loss of erection. [Sildenafil Citrate](#) inhibits PDE-5, allowing cGMP to accumulate and maintain an erection.

Dapoxetine (100mg)

[Dapoxetine](#) focuses on the psychological aspects of [sensual dysfunction](#), specifically premature ejaculation. It increases serotonin levels in the brain, a neurotransmitter associated with mood regulation and ejaculation control. By delaying the reuptake of serotonin, [Dapoxetine](#) helps prolong the time it takes to ejaculate, allowing men to have more satisfying and longer-lasting sensual experiences.

Benefits

- The [Sildenafil Citrate 100mg Extra Super M Force](#) component effectively treats [erectile dysfunction](#). It helps men achieve and sustain a strong erection, enhancing sensual performance and satisfaction.
- [Dapoxetine 100mg](#) in this medication addresses premature ejaculation, giving men better control over their ejaculation timing and ultimately leading to more fulfilling sensual encounters.
- [Extra Super M Force](#) combines the benefits of two medications in one pill, offering convenience and cost savings for individuals dealing with both ED and PE.

Usage and Dosage

[Extra Super M Force](#) should be taken orally with a glass of water approximately 30-60 minutes before sensual activity. It is essential to note that this medication should not be taken with alcohol or high-fat meals, as it may affect its efficacy. The recommended dosage is one tablet per day, and it is advisable to consult a healthcare professional before starting any medication for ED or PE.

Precautions and Considerations

- It is crucial to consult a healthcare provider before using Extra Super M Force to determine if it suits your specific health condition and to receive proper guidance on its usage.
- Inform your healthcare provider of your medications, as some drugs may interact with Extra Super M Force and lead to adverse effects.
- Extra Super M Force is a prescription medication for treating genuine medical conditions. It should not be employed for non-essential or leisure purposes.

Conclusion

Extra Super M Force is a combination medication that offers a promising solution for men with erectile dysfunction and premature ejaculation. Combining the effects of Sildenafil 100mg and Dapoxetine 100mg, it addresses both the physical and psychological aspects of sensual dysfunction, helping individuals regain their confidence and satisfaction.

However, it is crucial to use this medication responsibly and under the guidance of a healthcare provider. As with any medication, Extra Super M Force may have potential side effects and interactions with other drugs, making professional consultation a vital step in its usage. Ultimately, the availability of medications like Extra Super M Force provides hope and relief for those facing sensual health challenges, emphasizing the importance of seeking appropriate medical guidance and support for these issues.
