Psychological Causes of [Erectile Disorder](#)

- Depression
- Anxiety
- Other mental health disorders
- Stress
- Feeling self-conscious or nervous about sensual contact
- Relationship problems

Diagnosis of [erectile disorder](#) or ED

To diagnose the problem of [erectile disorder](#) the doctor might ask you a variety of questions. He might even perform a physical exam to make a perfect diagnosis. If any underlying medical condition is causing erection failure then he might perform various tests:

- **Blood Test:** A sample of blood is taken to find out the signs of diabetes, low testosterone, or other issues, such as liver or kidney disease.
- **Urine Test:** A sample of urine is taken to find out the signs of diabetes.
- **Psychological Exam:** The doctor might perform a screen test to find out whether you are suffering from depression or another mental health disorder

Important things to discuss with the doctor

When you are conversing with your doctor you must discuss the various symptoms you might be observing. You also need to tell your healthcare provider about how long you are suffering from the symptoms of erectile disorder. You can also tell him about the medications you consume. You must tell him if you drink alcohol or use tobacco products

About [Kamagra 100mg](#)
