Symptoms of [Female sensual dysfunction](#)

There are a variety of symptoms of [sensual dysfunction in females](#) . The symptoms can vary depending on the sensual dysfunction you might be suffering from.

- Low sensual desire: It is one of the most common types of [Female sensual dysfunction](#) . It comprises low sensual interest and desire to be involved in sensual contact.
- Sensual arousal disorder: Many women experience problems getting aroused to be involved in a lovemaking activity with their partner.
- Orgasmic disorder: A lot of females experience constant difficulty in acquiring orgasm even after attaining an adequate level of sensual arousal and even stimulation.
- Sensual Pain Disorder: A lot of females experience pain linked with sensual stimulation or vaginal contact.

Causes of [Female Sensual Dysfunction](#)

The sensual problems in females develop when there are fluctuations in hormones. This might occur after delivering a baby or during the menopause period. Even a lot of health conditions can also lead to [sensual dysfunction in females](#) . These might comprise cancer, diabetes, or heart and blood vessel (cardiovascular) disease.

The following factors can cause sensual dissatisfaction or dysfunction:

Physical Factors:

There are a lot of medical conditions that can lead to [sensual dysfunction](#) . These might comprise cancer, kidney failure, multiple sclerosis, heart disease and bladder problems. Even a lot of medications can lead to sensual dysfunction. There are a lot of factors that impact the sensual desire and even the ability of the body to experience orgasm.

Hormonal:

There are a lot of hormones that could cause variations in the genital tissues and even sensual responsiveness. A decrease in the level of estrogen could cause the flow of blood to the pelvic region to decrease. This can cause the genital sensation to lessen. This requires more time to build up arousal and reach orgasm. The lining of the vagina becomes thin and even less elastic. It can make you less sensual and active. You might begin to experience pain during the interaction. Even sensual desire begins to lessen with the decrease in the levels of the hormone. Even there are fluctuations caused due to variations in the hormonal levels that vary during birth or breast-feeding. It might even cause vaginal dryness and even impact your desire to involve in a sensual contact.

Risk factors

- Depression or anxiety
- Heart and blood vessel disease
- Neurological conditions, such as spinal cord injury or multiple sclerosis
- Gynecological conditions, such as vulvovaginal atrophy, infections or lichen sclerosis
