Causes of [Male Sensual Dysfunction](#)

The following are the common causes of [sensual problems in men](#):

1. Conditions or behaviours that increase the risk of vascular diseases, such as smoking, high blood pressure, diabetes, high cholesterol, and obesity, or the medications to treat these and other disorders
2. Diabetes, especially if you have type 2 diabetes
3. Hypogonadism, in which the testicles do not produce enough testosterone
4. Thyroid disorders (both hyperthyroidism and hypothyroidism)
5. Adrenal lesions (Cushing's syndrome)
6. Noncancerous pituitary growths increase the level of prolactin
7. Diseases that affect the nervous system, including strokes, spinal cord injuries, multiple sclerosis, long-standing diabetes, and Parkinson's disease
8. Damage to arteries or veins following pelvic surgery (such as prostate, colon, or bladder surgery) or after radiation treatment
9. Conditions having an impact on the male organ such as Peyronie's disease (penile curvature) or injury to the male organ
10. Cardiovascular (heart) disease
11. Blockages in the blood flow to the male organ
12. Leaky veins

Possible psychological causes of [Male sensual dysfunction](#)

1. Anxiety
2. Guilty feelings about sensual communication
3. Sensual aversion disorder

[Erectile disorder](#) (or Impotence)

[Erectile disorder](#) or ED is a common problem among the men that they report to their doctors. It does not allow men to be able to gain or even maintain an erection during sensual communication with the lady. It is not unusual for men to suffer from this problem. It can take place progressively or routinely. Then it requires treatment.

[Erectile disorder](#) (or Impotence) can happen:

1. When there supply of blood to the male organ is limited
2. stress or emotional reasons
3. warning signs of various illnesses like atherosclerosis (hardening or blocked arteries), heart disease, high blood pressure or high blood sugar from Diabetes

It is essential to find the cause of your problem to treat the illness. This will help to manage your overall well-being. It is even good for your sensual health and even heart health.

Working on the Erection process

During sensual arousal, a chemical is released in the male organ. This boosts the flow of blood to the male organ. The blood flows into the two erection chambers in the male organ. These chambers are made up of spongy muscle tissue (the corpus cavernosum). Though these chambers are not hollow. The spongy tissues trap the blood during the erection. The pressure of the blood in the chambers makes the male organ firm. This generates an erection.

Symptoms of ED

[Erectile disorder](#) might increase the significant risk of getting a heart attack, stroke or circulatory problems in the legs. It is essential to contact a primary care provider or a Urologist.

ED comes up with the following symptoms:

1. Unable to gain an erection
2. Unable to maintain an erection
3. Low self-esteem
4. Depression
5. Distress for the man and his partner

Early ejaculation (PE)

The problem of early ejaculation (PE) causes the ejaculation to occur faster than the partner would like. About men between the ages 18 and 59 suffer from it more. It is also known as

1. rapid ejaculation
2. premature climax
