### **Various Causes of [erectile disorder](#) or Impotence**

There are a lot of factors that impact the vascular system. These impact the vascular system, nervous system, and endocrine system. Older men are more likely to develop erectile disorder. [Erectile disorder](#) can be managed in any age group.

#### **High cholesterol:**

Those men who have an increase in the level of cholesterol have an amplified risk of suffering from atherosclerosis. This condition causes the arteries of the male organ to become clogged. This results in the impaired flow of blood to the male organ. This is because the arteries in the male organ don't allow adequate flow of blood to reach the male organ.

#### **Depression**

It can lead to a lack of interest in sensual communication. If you are suffering from depression then seek the help of the doctor.

#### **Smoking:**

The habit of smoking regularly can cause great harm to the blood vessels. It even includes those that supply the blood to the male organ. This can result in difficulty while trying to attain or even maintain an erection.

### **Cycling:**

When a man continuously paddles for long hours without any change in the position then it causes the perineal nerves and blood vessels to compress. This might cause the nerves to get damaged resulting in [erectile disorder](#). Long hours in the saddle can cause numbness in the male organ. It is essential to adjust your position of riding and take a break. Even rodeo riding can cause the same effect.
