Types of [Male Sensual Dysfunction](#)

[Erectile disorder](#) (or Impotence)

[Erectile disorder](#) is a common problem among men. It does not allow men to be able to gain or even maintain an erection during sensual communication with the lady. It is the most commonly reported sensual problem among the males. This illness impacts the men all over the world. The following are the symptoms of [erectile disorder](#) in men:

- Unable to gain an erection during sensual communication
- Unable to maintain an erection during sensual communication
- Low sensual drive
- Low libido

Treatment of [Male Sensual Dysfunction](#)

Lifestyle changes: You can go for daily exercise and healthy diet and quitting smoking.

Medications: This might comprise the oral medications that work by increasing the flow of blood to the male organ.

Penile injections or suppositories: These are injections that help the male organ of the man to get hard and gain an erection during sensual communication with the lady.

Male organ pumps: These are tubes that can help a man create and maintain an erection by pulling blood into the male organ.

Surgery: These help to insert the [male organ](#) implants into the male organ to make it erect.

Early ejaculation

[Early ejaculation](#) or PE is a common sensual illness among men. It doesn't allow men to gain sensual satisfaction from the sensual activity. It makes the man ejaculate too soon during sensual communication. There is no set time for the men to release semen. If a man ejaculates within 1 minute of penetration of the male organ into the vagina then it is considered as Early ejaculation or PE. A lot of men during foreplay, or when trying to insert male organs during the sensual contact. If it happens sometimes it is not a cause of concern. But in case it happens regularly then it is essential to find the solution.

This problem is very common among the men. It is more common in young men. Men who are old take a longer time to ejaculate. However, the problem of early ejaculation can take place at any age.

These problems a lot of times can be lifelong if they begin the first time a man is involved in sensual contact with a lady. Many times it is caused due to a chemical imbalance in the brain. It causes a lower threshold for ejaculation. It might even be caused due to psychological

factors such as performance anxiety. Other causes include performance anxiety, generalized anxiety, stress, [erectile disorder](#) or relationship problems.

Alcohol can make the problem of early ejaculation more worse. It is caused by to creation of chemical imbalances in the brain. It lessens the threshold for ejaculation. It might even be caused due to psychological factors such as performance anxiety.
