

An Oral Medication for the Management of Erection Failure With Sildigra Super Active

[Erectile disorder](#) or ED is a sensual condition among millions of men all over the world. This illness is also termed as Impotence in men. It does not allow men to be able to achieve or preserve an erection during sensual contact. This illness might mean total inability to attain or erection. It might also mean that you are able to gain an erection but not being able to sustain an erection. It might even mean a routine to preserve only brief erections. A lot of men feel embarrassed to discuss their illness with their doctor. There is no need to suffer in silence with this sensual condition. [Sildigra Super Active](#) from [Rsmmultilink](#) is a superb medication for the management of the [erectile disorder in men](#). It comprises [Sildenafil Citrate 100mg](#).

The medication works by raising the flow of blood to the male organ. This helps men to gain or sustain firm erections during the sensual contact with the lady. Take the medication in 100 mg dosage form with the help of water. Men need to take the medication 30 minutes to 1 hour before the lovemaking activity.

Causes of Erection failure or Impotence in men

The erection takes place when the blood flows to the corpora cavernosa (erection bodies). It then gets trapped there. If the blood does not get trapped in those erection bodies, you might begin to experience erectile disorder. There are lots of causes behind the occurrence of [erectile disorder](#):

Vascular conditions:

- High blood pressure
- Elevated cholesterol
- Cardiovascular disease
- Diabetes
- Trauma:
- Spinal cord injury
- Pelvis injury

Neurologic disease:

- Stroke
- Parkinson's disease
- Alzheimer's disease
- Radiation to the pelvis for cancer
- Endocrine:
- Hypogonadism (low testosterone)
- Hyperprolactinemia (high prolactin levels)

Pelvis surgery:

- Radical prostatectomy
- Surgeries for rectal cancer or bladder cancer

Half number of men with the diabetes from the problem suffers from the problem of [erectile disorder](#). Even increase in the level of blood sugar can lead to harming the nerves that regulate the sensual stimulation. These can even damage the blood vessels that are required to offer adequate flow of blood to the [male organ](#). These blood vessels help a man to gain or maintain an erection.

Oral medications is the first step for the treatment of [erectile disorder](#). These work for a lot of men. Men with diabetes might prefer treatment options such as

- pump,
- male organ injection therapy, and
- male organ implants.

These oral medications offer men the greatest satisfaction rate concerning all types of treatment options.

ED & Heart Disease

[Erectile disorder](#) is a warning sign of current or future heart disease a lot of times. [Erectile disorder](#) can even lead to coronary artery disease in most cases. When a man is suffering from heart disease, or coronary artery disease he has blocked blood vessels. This will impact the tiny arteries in your male organ. You can even refer to the cardiologist to find out if you are suffering from cardiovascular disease that is leading to erectile disorder in men.

You can improve your heart health by:

- increasing your physical activity,
- stop the use of tobacco products,
- losing weight, and
- consuming a healthy and well-balanced diet.

Prostate Cancer & Erectile disorder

[Erectile disorder](#) many times is an illness caused due to the side effect of prostate cancer treatments. The nerves that generate an erection lie close to the male organ. These are usually injured during the prostate

cancer treatments. With the help of nerve-sparing procedures, men might be able to gain the proper erectile functioning. It might even take a long time to regain their capability to attain or maintain an erection.

If you are experiencing [erectile disorder](#) after the prostate cancer treatment then you can once again relive your sensual life back with the help of the best treatment options such as oral medications.
