Various Categories of Sensual dysfunction in men:

The following are the various types of sensual dysfunction in men:

Erectile disorder

ED or Impotence is a common problem among men. It does not allow men to be able to gain or maintain an erection during the sensual interaction. Men suffering from erectile disorder have poor sensual functioning.

Early ejaculation (PE)

PE is when a man is unable to delay the process of ejaculation. This illness makes a couple feel unsatisfied from the sensual contact.

Common Causes of Sensual dysfunction in men

Physical Causes of Sensual dysfunction in men

Physical causes of Sensual dysfunction in men comprise the conditions or behaviours that might increase the risk of harming the sensual functioning in men. These might comprise the following:

- smoking
- high blood pressure
- diabetes
- high cholesterol, and
- obesity, or
- the medications to treat these and other disorders
- Hypogonadism, in which the testicles do not produce enough testosterone
- Thyroid disorders(both hyperthyroidism and hypothyroidism)
- Adrenal lesions (Cushing's syndrome)
- Noncancerous pituitary growths that increase levels of a hormone called prolactin
- strokes,
- spinal cord injuries
- multiple sclerosis
- long-standing diabetes, and
- Parkinson's disease
- Damage to arteries or veins following pelvic surgery (such as prostate, colon, or bladder surgery) or after radiation treatment
- Conditions that impact the male organ, such as Peyronie's disease (penile curvature) or injury to the penis itself or to the arteries, veins, or nerves that supply the male organ
- Cardiovascular (heart) disease
- Blockages in the blood flow to the penis (usually due to injury)
- Leaky veins

Early ejaculation (PE)

PE might be caused due to the following factors:

- neurological disorder
- prostate infections, or
- urethritis
- Anxiety
- Guilty feelings about sensual act
- Sensual aversion disorder
