Sildigra Super Active

(Sildenafil 100 Mg)

Mechanism of Action

When a man's sensual organ is aroused, the nitric oxide is secreted into the erectile tissue of the genital area. This leads to the production of cyclic guanosine monophosphate (cGMP). This chemical allows the smooth muscles in the vessels of the genital area to relax and dilate these vessels, accommodating the blood flow into the erectile tissue and producing an erection in the process. Nevertheless, the enzyme phosphodiesterase type 5 (PDE5) disrupts cGMP by breaking it apart, resulting in a reduction in blood flow and the end of the erection. The inhibition of PDE5 by [sildenafil 100mg](#) results in lingering erections due to the prolongation of cGMP effects for a more extended period.

Dosage and Administration

The pack of **Sildigra Super Active** consists of soft gel capsules that have 100 mg of [Sildenafil](#). Typically, the prescribed dosage for most adult male patients is one oral capsule, administered approximately 30 minutes to 1 hour prior to the sensual activity. It is necessary to take pills strictly according to the doctor's instructions regarding dosage and time in the course of treatment. However, it is equally important to realize that **Sildigra Super Active** should not be taken more than once a day.

The advantages of [Sildigra Super Active](#)

- A medicine called [Sildigra Super Active](#) can enable you to achieve and retain strong erections, boosting your arousal and fulfillment during sensual intercourse.

- Soft gel capsules made of [Sildigra Super Active](#) instead of a conventional tablet provide faster absorption and, hence, faster onset of the effect.
- Through successfully managing this problem, the [Sildigra Super Active](#) pill can increase the confidence and self-esteem of a man, leading to a better feeling of life.

Precautions and Considerations

- Before taking [Sildigra Super Active](#), individuals should inform their doctor of any existing medical conditions, particularly those of heart and blood circulation, liver or kidney problems, and any allergies that can react to other medication.
- [Sildigra Super Active](#) to have a competitive relationship with some specific medications, especially nitrates used to treat cardiac problems. All information regarding medication, supplements, or herbal preparations must be disclosed since interaction is possible.
- The excessive drinking of alcohol in combination with grapefruit juice may interact with [Sildenafil](#), temporarily increasing the risk of side effects or the decreased effectiveness of the medicine.

Conclusion

[Sildigra Super Active \(Sildenafil 100mg\)](#) offers a strong medication that works effectively for men experiencing symptoms of erectile dysfunction. It increases blood flow to the genital area and gives men long-lasting erections and high sensual performance and satisfaction. On the other hand, it is imperative to use this medicine with the proper caution prescribed by the medical practitioner and be aware of the potential risks associated with it. By adequate dosage, [Sildigra Super Active](#) works well to restore sensual self-confidence and enable men to enjoy satisfying sensual partnerships.
