[Buy Kamagra Gold cheap price](#) that inhibits the functioning of the PDE5 enzyme. It grows the stream of blood to the male organ. This helps men gain and maintain hard erections during the lovemaking activity.

Causes of Erectile Disorder or Impotence

There are a lot of causes of erectile disorder, including:

- Medical conditions
- Medications
- Nerve damage
- Hormonal issues
- Psychological issues or mental health conditions

Other medical conditions that can cause erectile disorder or impotence

A lot of medical conditions can cause [erectile disorders](#). Vascular disease is the most common cause of erectile disorder. Vascular disease is a type of blood vessel condition. This limits the flow of blood to the male organ. This results in a shortage of blood, resulting in problems linked to having or maintaining an erection.

- Diabetes
- Hypertension
- Hyperlipidemia
- Obesity
- Prostate cancer treatment

A lot of medications can cause harm to the sensual functioning of males. You need to contact your healthcare provider to see what is causing your erectile disorder.

A lot of damaged nerves due to a lot of medical conditions can cause erection failure, or ED. These might be caused by multiple sclerosis, diabetes, spinal cord damage, or prostate surgery. Nerve damage makes it difficult to get and even maintain an erection during the lovemaking activity. Hormone levels, such as decreased testosterone levels, can lead to erectile disorder and even lower the sensual drive in males.

Psychological issues

Psychological issues can have a great impact on sensory performance. These can include:

- Depression
- Anxiety
- Fear
- Guilt
- Low self-esteem
- Chronic stress
- Performance Anxiety
