(24HRS LIMITED OFFER)

Getting a bit unstable and wobbly on one's feet as a result of aging is often explained as a natural consequence of aging. The fact is that these issues are not the result of an aging body. Instead, the inventors of Neuro-Balance Therapy believe that these falls are caused by a nerve in the foot. About 97% of falls in people over 60 are attributed to this nerve, and roughly 28,000 fatalities each year are attributed to this condition, but the business claims its new program will assist.

Neuro-Balance Therapy teaches customers how to employ a ten-second daily routine with a unique little knobby ball to revitalize nerves and increase their strength and stability regardless of age. The approach is effective regardless of the user's age, weight, or level of daily discomfort, or whether they are bedridden. Even those who utilize prescription drugs may benefit from the program, regardless of their imbalance. In addition, this technology enables users to walk on any surface without embarrassment or discomfort.

Participating in Neuro-Balance Therapy assists users in enhancing their balance. Instability starts with the Deep Peroneal Nerve, which is responsible for activating all the small muscles in the foot, ankle, and lower leg that prevent falls. The Neuro-Balance program requires just a

few minutes each day to reawaken the nerve in order to increase stability and restore balance.

Balance implies restoring independence, which is what Neuro-Balance Therapy intends for its patients. The majority of individuals who follow the Neuro Balance program may begin to feel free of weakness and instability. Consumers do not have to fear collapsing in their houses and being left without assistance until a family member discovers them or they reach the hospital.

Over one hundred thousand individuals have utilized Neuro-Balance Therapy to treat their imbalance issues and have learnt how to regulate a particular nerve and muscle. They discovered that at the conclusion of the second week of the training, they had seen effects.

Included Extras with Neuro-Balance Therapy

As part of a promotion in 2022, your purchase of Neuro-Balance Therapy comes with the following bonuses:

Free Bonus #1: Top 20 Tips for Fall-Proofing Your Home (\$97 Value): This book instructs you on how to fall-proof your home. You are provided with a 20-item checklist to ensure the safety and security of your home. You may

Downloadable Version of Neuro-Balance Therapy: All purchases of Neuro-Balance Therapy include both a physical and downloadable version. The actual DVD and physical book may be used at home whenever desired. Then, you may download the digital version to any tablet, computer, or other mobile device in order to access the program while on the road. Whether you prefer tangible books and DVDs or digital tools to study, the Neuro-Balance Therapy program offers a variety of possibilities.

How may your likelihood of falling increase?

Even with the Neuro-Balance Therapy strategies that consumers learn, there are a few instances in which they increase their risk of falling by 96%. If a person has fallen before, they have a higher chance of falling again, but the application provides users with all the necessary information. They may be unaware that their activities put them in danger.

This software contains information that explains:

The majority of trainers and therapists make their patients do an activity that increases their chance of falling.

A foot cover prevents users from catching themselves during a fall.

Most individuals tell themselves a falsehood that hinders their prospects of recovery.

This material, in addition to the courses in the Neuro-Balance Therapy program, is supported by several scientific studies that substantiate its claims. Using the Neuro-Balance Therapy software, customers will learn

how to stimulate the nerve that increases their chance of falling within 10 seconds of waking up.

How Does Neurobalance Therapy Function?

Chris Wilson, who considers himself a Certified Balance Specialist, is the originator of the new equilibrium program. Seeing his family battle with balance difficulties prompted him to pursue this line of work, and he designed a 10-second program that may assist.

While there is less knowledge on what helps to reduce instability concerns, he begins by identifying what would NOT benefit consumers, which includes the following:

Bosu balls and stability balls.

Constantly donning footwear

Believing that the risk of falling increases with age.

The authors of the Neuro-Balance program claim that the 10-second at-home stability regimen will begin to mend the nerve connected with falling and clumsiness. The complete program is included on a DVD, enabling participants to increase their strength and balance under

visual instruction. Users choose their sequence (beginning, intermediate, or advanced) and follow along with the provided personal spike ball.

## Commencement of Neuro-Balance Therapy

The purchase price of the Neuro-Balance Therapy package is \$47 plus shipping and handling fees. If they know someone who may benefit from the initiative, consumers can purchase two pairs of spike balls for \$77. This purchase gives consumers access to both digital and physical material.

In addition to the paid program and spike ball, customers will also get the Top 20 Tips to Fall-Proof Your Home handbook. This article outlines some measures that consumers should take to make their homes safer.

Users will also have immediate access to a downloaded software version, allowing them to begin the regimen immediately.

Neuro-Balance Therapy Characteristics & Advantages

The official website for Neuro-Balance Therapy lists the following advantages:

Simple 10-second routine that might potentially save your life

Method validated by science and developed by a Certified Balance Specialist

There is no need to see a physician, physical therapist, or chiropractor.
