The [Sildigra 120 online](#) medication is a type of PDE5 inhibitor and works by obstructing the functioning of a PDE5 enzyme. It is a great medication that boots the flow of blood to the male organ and helps men gain and maintain firm erection during sensual communication with their companion.

Symptoms of Erectile Disorder or Impotence in Males

The major symptoms observed by men who suffer from erectile disorder are changes in the quality of their erections. If the reason behind the occurrence of erectile disorder is physical, then you will be unable to gain an erection when you wake up during the morning. The problem of erectile disorder has an impact on both your ability to gain an erection and the time for which the erections last. This illness can even impact your sensual desires as well.

Causes of Erectile Disorder or Impotence in Males

There are a lot of causes of erectile disorder in males:

Physical causes of erectile disorder might comprise

- diabetes,
- high blood pressure,
- obesity,
- the side effects of medication,
- alcoholism,
- multiple sclerosis,
- hormonal problems, and
- Sleeping problems.

Psychological causes of erectile disorder might comprise

- stress,
- anxiety,
- depression, or
- Issues within your relationship.

Erectile disorder can also take place after the treatment. It might include surgery on the spinal cord or prostate. Men who are old, consume alcohol, or are overweight are at an increased risk of struggling with erection failure.

Prevention of Erectile Disorder or Impotence in Males

The risk of suffering from the problem of erectile disorder can be reduced by making the following changes to your lifestyle:

- Stop smoking
- Try to preserve a healthy weight.
- Do regular exercise.
