The advertisement features a central image of a man and a woman in a romantic embrace. To the left, there is a product shot of the Tadagra Strong 40 packaging, including a box and two blister packs of yellow tablets. A 'Special Discount' badge is placed next to the product. At the bottom left, a WhatsApp icon is followed by the phone number +91 9216325377. On the right side, the website name 'SnovitraSuperPower.com' is written vertically in a gold banner.

The medication is a type of PDE5 inhibitor. This increases the flow of blood to the male organ. This helps to gain and maintain an erection during the sensual communication with the lady.

Signs and symptoms of impotence in males

- Low level of sensual desire or libido during the sensual contact
- Problems related to ejaculation during sensual contact
- Suffering from problems that have a link with orgasm or climax during the sensual contact

- Male organ curvature
- The male organ does not remain hard during sensual contact with the companion.
- Man might lose an erection after some time.
- Unable to gain an erection during the sensual contact

Process of Gaining and Maintaining an Erection

When the blood flows to the male organ, then the corpora cavernosa swells. This leads to the compression of the blood vessels towards the tunica albuginea. These blood vessels play an important role as they drain blood out of the male organ. The veins in the male organ get compressed, which prevents the blood from draining out of the male organ. This helps to develop a hard erection.

The level of cGMP lessens due to the functioning of phosphodiesterase type 5 (PDE5). This might tighten the muscles in the male organ. This causes blood flow to the male organ to decrease. The veins don't compress with a low amount of blood flowing to the male organ. This might cause ejaculation to occur and an erection to fall down.
